- 说明:
 - 本篇文章为目录,文章中链接在未翻译状态时会指向原始链接,文章在翻译完成之后则会在文章标题前添加【已翻译】字样,并且文章指向的链接会修改为简书的链接
 - 不保证按照顺序进行翻译。

你是否渴望得到配置你的 Metasploit 开发环境,开始发起 GitHub Pull Request 并且提供精彩的漏洞利用代码?如果是这样,那么你来对地方了!

你是一个 Metasploit 的使用者吗?并且想像电影中演绎的破解东西 (首先保证你经过授权) 吗? 最快开始的方法是下载 Metasploit 二进制安装包。这将会给你访问所有 Metasploit 版本的权限:

- 自由,开放源代码的 Metasploit Framewrok 免费社区版本
- Metasploit Pro 的试用版本。

如果你正在使用 Kali Linux, 那么 Metasploit 已经在你的系统中预先安装,请查看 Kali 文档 来获取如何在 Kali Linux 中使用 Metasploit 的详情信息。

如果你是一个 Exploit 开发者,你或许想要查看我们的 <u>可接受模块以及增强指南(译者注:Guidelines for Accepting Modules and Enhancements)</u>,在这个文档中你会找到:当我们看到关于新的 Metasploit 模块的 Pull Request 的时候所有我们期望看到的东西。(译者注:Pull Request的规格和标准,融入一个社区当然要遵守社区既定的规则) 如果你对于你想要做什么没有什么想法的话,你也可以参考这个指南:<u>为 Metasploit 做出贡献</u>,然后就可以着手 配置 Metasploit 开发环境

开始

- Setting Up a Metasploit Development Environment
- <u>Using Metasploit</u>
- <u>【已翻译】使用 Git</u>
- Reporting a Bug

贡献代码

- Contributing to Metasploit
- Creating Metasploit Framework LoginScanners
- Guidelines for Accepting Modules and Enhancements
- Common Metasploit Module Coding Mistakes
- 【已翻译】代码风格小建议
- Committer Rights
- Landing Pull Requests

Metasploit 开发

- 【已翻译】为什么选择 Ruby?
- 【已翻译】代码风格小建议
- How to get started with writing an exploit
- How to get started with writing an auxiliary module
- How to get started with writing a post module
- How to get started with writing a Meterpreter script
- Loading External Modules
- 【已翻译】漏洞利用程序评级
- Metasploit module reference identifiers
- How to check Microsoft patch levels for your exploit
- How to clean up files using FileDropper
- How to deprecate a Metasploit module
- How to do reporting or store data in module development
- How to log in Metasploit

- How to obfuscate JavaScript in Metasploit
- How to parse an HTTP response
- How to Send an HTTP Request Using HTTPClient
- How to send an HTTP request using Rex::Proto::Http::Client
- How to use command stagers
- How to use datastore options
- How to use Msf::Auxiliary::AuthBrute to write a bruteforcer
- How to use PhpEXE to exploit an arbitrary file upload bug
- How to use Powershell in an exploit
- How to use Railgun for Windows post exploitation
- How to Use the FILEFORMAT mixin to create a file format exploit
- How to use the Msf::Exploit::Remote::Tcp mixin
- How to use the Seh mixin to exploit an exception handler
- How to use WbemExec for a write privilege attack on Windows
- How to write a browser exploit using BrowserExploitServer
- How to write a browser exploit using HttpServer
- How to write a check() method
- How to write a HTTP LoginScanner Module
- How to write a module using HttpServer and HttpClient
- How to zip files with Rex::Zip::Archive
- Oracle Usage
- Rex Layout

Metasploit Payloads (译者注:有时候被翻译为"攻击载荷")

- 【已翻译】How Payloads Work
- Merging Metasploit Payload Gem Updates
- Meterpreter Configuration
- Meterpreter HTTP Communication
- Meterpreter Paranoid Mode
- Meterpreter Reliable Network Communication
- Meterpreter Sleep Control
- Meterpreter Stageless Mode
- Meterpreter Timeout Control
- Meterpreter Transport Control
- Meterpreter Unicode Support
- Payload UUID
- Python Extension
- The ins and outs of HTTP and HTTPS communications in Meterpreter and Metasploit Stagers
